QUARZO

Grigio

Rosso

 **NOTA:** i formati "piani", caratterizzati da smussi molto ridotti, richiedono un piano di posa accurato e una vibrocompattazione con tappetini di gomma. La massicciata, sulla quale va stesa la sabbia di allettamento, deve possedere un adeguato "modulo di deformazione" misurato con prova di carico su piastra da 30 cm (>400 daN/cm² per traffico leggero e >800 daN/cm² per traffico pesante).

 **NOTE:** Flat formats, characterized by very reduced bevells, require an accurate laying surface and a vibrocompacting with rubber mats. The ballast, on which the bedding sand must be extended, must have a suitable "deformation module" measured with load test on a 30cm plate. (> 400 daN / cm² for light traffic and > 800 daN / cm² for heavy traffic).

 **NOTE:** Les formats "plats", caractérisés par des biseaux très réduits, nécessitent une surface de pose précise et un vibrocompactage avec des tapis en caoutchouc. Le ballast, sur lequel le sable de litier est lui-même, doit avoir un "module de déformation" adéquat mesuré avec un essai de charge sur une plaque de 30 cm (>400 daN/cm² pour trafic léger et >800 daN/cm² pour trafic lourd).

 **HINWEIS:** Die "platten" Formate, die sich durch sehr reduzierte Abschrägen auszeichnen, erfordern eine genaue Verlegeoberfläche und eine Vibrationsverdichtung mit Gummimatten. Die Bettung, auf die der Streu-Sand verlegt werden soll, muss über ein geeignetes "Deformationsmodul" verfügen, das mit einem Belastungstest auf einer 30-cm-Platte gemessen wird (> 400 daN / cm² bei leichtem Verkehr und > 800 daN / cm² bei starkem Verkehr).
